

EZT Temperature Monitor from Sensitech Inc.

A simple and economical way to monitor the temperatures your product experiences.

The Ryan® EZT is packed eight to a box with four 8-packs per case. You can select monitoring ranges of 5, 10, 20, 40 or 75 days. The pressure sensitive chart paper allows for easy documentation using a ballpoint pen or other firm tip writing instrument.

Operating Instructions

Note: *Instrument is shipped with chart documentation window open. Only close the window after the chart header documentation is complete.*

Fill out chart header through the window on front of instrument; instrument number is located immediately below chart window. Available fields include Instrument Number, Date, and Time as well as open lines for your use. **Completing the chart documentation is for your protection.** Flip window closed and click to secure.

To start, pull tab from the side of the instrument. Moving white gear on the motor will be visible in round view window below tab. Pulsing movement of gear insures unit is operational.

To install in vehicle, remove cover from sticky tape on back of EZT and press instrument onto smooth dry surface away from doors or direct air blast. Or place instrument on top of lading.

To Remove Chart After Use

Open EZT by peeling silver security seal and open unit by pressing the indicated bars on top of instrument as shown to open the clam shell design. Broken seal indicates possible tampering. Report signs of tampering to your supervisor immediately.

Grasp chart with thumb and forefinger and pull straight up.
